

Exercise Sheet 0: Introduction to Python

Maximilian Marx, Markus Krötzsch
Knowledge Graphs, 2022-10-18, Winter Term 2022/2023

Exercise 0.1. Make sure that `git`¹ and `git-lfs`² are installed in your computer.

Exercise 0.2. Find a Python 3 interpreter and a suitable code editor for your platform and make sure they are installed on your computer.

Exercise 0.3. Write a (Python) program that takes as input a directed graph in the format given below, and prints out all vertices that have maximal out-degree. The input should be read from a file given as a command-line argument.

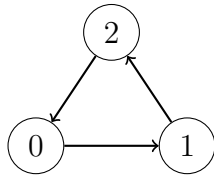

The file format is as follows:

$$\begin{array}{l} n \\ s_1 \quad t_1 \\ s_2 \quad t_2 \\ s_3 \quad t_3 \\ \vdots \quad \vdots \\ s_m \quad t_m \end{array}$$

The first line consists of a single integer n , the number of vertices of the graph. Each of the following lines consists of two integers s_i and t_i , specifying an edge from vertex s_i to vertex t_i , separated by a space. Vertices are numbered $0, 1, \dots, n - 1$.

As an example, the following input encodes a directed triangle:

```
3
0 1
1 2
2 0
```

Data files are available on Github³.

Exercise 0.4. Modify your program to compute the vertices of minimal in-degree instead.
